PROFESSIONAL SUMMARY

Experienced in building scalable software using Clean Architecture, BLoC/Cubit, and feature-first modular design while integrating modern backend technologies including Firebase, Supabase, REST APIs, AWS S3, Stripe, WebRTC, and WebSockets. Contributed to enterprise collaboration, productivity, healthcare, loyalty, and sports platforms by delivering maintainable, high-performance solutions focused on scalability, code quality, and exceptional user experience.

KEY HIGHLIGHTS

- 4+ Years of Professional Flutter Development
- 5 Enterprise-Scale Mobile Applications Delivered
- Real-Time Collaboration using WebRTC & WebSockets
- CI/CD Automation using GitHub Actions
- Secure AWS S3 & Stripe Integrations
- Full Arabic (RTL) & English Localization
- Clean Architecture & BLoC/Cubit Specialist
- Production-Ready Applications on Android & iOS

CORE TECHNOLOGIES

Languages: Flutter, Dart

Mobile Development: Flutter SDK, Material Design 3, Responsive UI, Adaptive Layouts, Android, iOS

Architecture: Clean Architecture, Feature-First Architecture, SOLID Principles, Repository Pattern, Dependency Injection

State Management: BLoC, Cubit, Provider, GetX

Backend & APIs: REST APIs, Dio, Firebase, Supabase, Stripe, AWS S3

Real-Time Technologies: LiveKit, WebRTC, WebSockets

Development Tools & CI/CD: Git, GitHub, GitHub Actions, Postman

Navigation & Localization: GoRouter, Internationalization (i18n), RTL Support, Arabic Localization

Testing: Unit Testing, Integration Testing, Widget Testing

PROFESSIONAL EXPERIENCE

Flutter Developer — *WeCodeForYou.io*

December 2023 – Present

- Architected and delivered multiple enterprise Flutter applications serving collaboration, productivity, healthcare, and loyalty platforms.
- Engineered 25+ production-ready mobile screens while maintaining reusable UI components and consistent design standards.
- Integrated secure authentication, cloud storage, payment processing, and backend communication using Firebase, Supabase, AWS S3, Stripe, and REST APIs.
- Implemented real-time collaboration features including video meetings, instant messaging, and live synchronization using LiveKit (WebRTC) and WebSockets.
- Automated Android release builds via GitHub Actions CI/CD pipelines, improving deployment consistency and reducing manual release effort.
- Delivered complete RTL localization supporting Arabic language, bidirectional layouts, localized formatting, and adaptive user interfaces.
- Improved application maintainability by enforcing Clean Architecture, feature modularization, and reusable business logic across multiple enterprise products.

SELECTED ENTERPRISE PROJECTS

We-Co Corporate Suite | *Enterprise Productivity Platform*

Tech Stack: Flutter • BLoC • Clean Architecture • AWS S3 • REST APIs • GitHub Actions • CI/CD

Designed and developed WeCodeForYou's flagship enterprise productivity platform unifying document editing, spreadsheets, presentations, and cloud storage into a single cross-platform Flutter application.

- Designed a modular feature-first architecture enabling independent feature development while maximizing code reuse across the application.
- Implemented secure AWS S3 pre-signed upload/download workflows to support enterprise document management with authenticated file access.
- Delivered complete Arabic localization with full RTL support, localized formatting, and adaptive layouts across the application.
- Automated Android release builds using GitHub Actions, improving deployment consistency and reducing manual release effort.

We-Co Collaboration / *Enterprise Collaboration Platform*

Tech Stack: *Flutter • LiveKit • WebRTC • WebSockets • BLoC • REST APIs*

Developed an enterprise collaboration platform providing video conferencing, team messaging, email management, and task planning inside a unified Flutter application.

- Integrated LiveKit WebRTC to support high-quality video meetings with participant management, camera switching, mute controls, and dynamic meeting layouts.
- Built persistent real-time messaging using WebSockets with typing indicators, message synchronization, and read receipts.
- Developed modular business features including chat, meetings, planner, email, notifications, and user management.
- Optimized real-time communication performance in coordination with backend engineers to ensure reliable synchronization between connected users.

DocNMore / *Healthcare Marketplace Platform*

Tech Stack: *Flutter • Supabase • Stripe • REST APIs • flutter_map*

Built a healthcare marketplace connecting patients with clinics and doctors, providing appointment booking, secure online payments, and clinic management capabilities.

- Integrated Supabase Authentication, Database, Storage, and Realtime services to build a scalable Backend-as-a-Service solution.
- Implemented secure Stripe payment workflows supporting appointment reservations and healthcare service purchases.
- Developed location-based clinic discovery using interactive maps and customized map markers.
- Built multi-role application flows supporting patients, healthcare providers, and administrative users.

D-Squares / *Customer Loyalty & Rewards Platform*

Tech Stack: *Flutter • Firebase • BLoC • REST APIs*

Developed a loyalty application enabling users to discover brands, collect reward points, redeem offers, and receive personalized promotions.

- Integrated Firebase Authentication, Google Sign-In, OTP verification, and Firebase Cloud Messaging (FCM).
- Built dynamic home feeds, categorized offers, loyalty tracking, notifications, and profile management.
- Maintained scalable application architecture using BLoC and reusable business components for future expansion.

Darabny / *Sports Coaching Ecosystem*

Tech Stack: *Flutter • Firebase • Firestore • BLoC*

Developed a multi-role sports platform connecting coaches, athletes, parents, nutritionists, and doctors through role-specific experiences.

- Designed role-based application flows while maintaining a unified architecture and shared business logic.
- Implemented coach onboarding, profile verification, bookings, consultation scheduling, and session management.
- Built real-time backend functionality using Firebase Authentication and Cloud Firestore.

PERSONAL & COMMERCIAL PROJECTS

Modern Flutter Auth UI Kit / *Commercial-Grade Developer Tooling*

Engineered a commercial-quality Flutter authentication UI kit designed for developers and startups, featuring a Material 3 design system, responsive mobile/tablet/desktop layouts, and dynamic Dark/Light theme switching.

- Architected with Clean Architecture, comprehensive form validation, password strength indicators, social authentication flows, unit testing, and full technical documentation.
- Status: Commercial Product, ready for marketplace distribution.

ShopWave / *Commercial E-Commerce App Template*

Developing a professional Flutter e-commerce app template built for marketplace sale on platforms such as CodeCanyon and Gumroad.

- Built using event-driven BLoC state management for core commerce flows (product catalog, cart, checkout) and Cubit for simpler UI state (theming, authentication).
- Status: Commercial Product in active development for marketplace distribution.

EDUCATION & TRAINING

Faculty of Computers & Artificial Intelligence — Cairo University

Bachelor's Degree | Graduated: 2022

Professional Training

- Orange Digital Center: Flutter Development Program (2022 – 2023) — Advanced Flutter, Clean Architecture, BLoC, REST APIs, Agile
- Route Academy: Flutter Development Diploma (2021)

LANGUAGES

Arabic: Native

English: Professional Working Proficiency (B2)

ADDITIONAL INFORMATION

- Work Authorization: Available for Full-Time, Remote, Hybrid, On-Site, and Relocation roles.
- Availability: Ready for immediate engagement with distributed international teams.
